2D drawing 2D objects are drawn with a 2D object. 2D objects can be linked to other 2D objects. 2D objects can be linked to 3D objects. The 2D and 3D objects form the structure of the drawing. 2D and 3D objects can be linked to 2D and 3D grids. These grids are "instantiated" (bound) to the objects, and can be linked to other objects. 2D and 3D objects can be linked to 3D solids and surfaces. Layered drawing views: Optimize AutoCAD drawings by displaying only the content you need, and in the most efficient layout. Place drawings in a sequence or separate layers to show only the drawings you want to see. Break a drawing down into its component parts to create a drawing template to duplicate in other drawings. Create complex drawings from commonly used parts using components. Easily access a specific version of a drawing by pinning it to a drawing page. Access previous versions of a drawing in the drawing history. Faster multi-touch drawing: Rapidly update your drawing based on data from external sources. Sign in to your cloud service or retrieve live data and place it into your drawings without opening the external data source. Export drawings to several popular CAD formats, including DWF, DWFx, DXF, and CADDIE. Create CAD drawings with 3D visual information. Design CAD structures with a family of powerful new 2D and 3D tools. Work smarter by creating multiple layers in one drawing, or create scalable parts from the same image. Flexible drawing tools:

Draw multiple objects from one image, using the PhotoRealistic tool, or the Corner Count tool to create arcs. Extract or add 3D geometry to drawings. Measure and plan for engineering projects, including walls, trusses, beams, columns, and rooms. The tool builds the structure in a single step, avoiding errors and wasting time. Analyze and generate 2D and 3D drawings from architectural, technical, and mechanical CAD drawings. Make significant changes to drawings with a stroke.
