File.Minimally invasive cardiac surgery using a novel miniature,
steerable, multichannel endoscope. A novel miniature steerable
multichannel endoscope, the LS2 Multichannel Spatially Localized
(LS2 MCL), for minimally invasive cardiac surgery was developed in
the laboratory of the Visible Human Project. The LS2 MCL is
configured of 12 cylindrical optical elements, with a diameter of 0.2
mm and a length of 2 mm, for imaging and radiofrequency catheter
ablation. The LS2 MCL was able to image the left ventricle with an x-
ray fluoroscopic generator that is routinely used for cardiac
catheterization. The LS2 MCL was used to image the left ventricle in
vitro, within a plastic model of the human heart, in a saline solution.
It was also used to perform radiofrequency ablation in isolated swine
hearts in vitro and to image the liver and kidneys in live swine in
vivo. In all experiments, the LS2 MCL was able to provide stable
images of the left ventricle and other structures for a period of 6 h.
The LS2 MCL could be used in the electrophysiology laboratory to

view the heart from multiple angles while a conventional cardiac catheter is in place in a standard clinical

During the years 1992-2001, there were almost 11,000 reports of violence to children 0-19 years of age to the Ontario Ministry of Children and Youth Services (MCYS). The Ontario Incidence of Child Abuse and Neglect (OINCAN) study was undertaken as part of the World Health Organization's World Report on Violence and Health. OINCAN was a prospective survey of MCYS cases of non-accidental child injury. The aim of this study was to examine time trends (1992-2001) in the incidence of violence to children by their caregivers and by others. OINCAN was the first

comprehensive study of time trends in child abuse in Ontario. The first data collection in the OINCAN study was in 1992. All incidents of violence to children (0-19 3e33713323
