It was the first version to support portability on Windows 3.1. This version also added the ability to share drawings over a network with Windows PCs (via the DGN or DWG format). The Windows version of AutoCAD had the ability to export its files in a special format, the .dvg format. Starting in the 1980s, technology for CAD grew in sophistication, culminating in the release of AutoCAD 4.0 in May 1991. AutoCAD continued to be a 32-bit commercial application; although it was available on other architectures, such as the 80286 and compatible, it ran only on an Intel 80386 based PC. In 1993, the first 3D Modeling System, 3DMax, was released and shortly after that the first 3D rendering program, 3D Studio, was released. In August 1994, after the Windows for Workgroups group had been adopted as the industry standard, AutoCAD was released for Windows 3.1x on the x86 platform, becoming the industry's first Windows based CAD application. AutoCAD History November 1980 AutoCAD is introduced as the first 32-bit "resident" application for DOS, becoming one of the first commercial, commercially supported application for DOS. Although as late as 1990 many users were still using non-resident applications, the 64-bit version is the first native DOS CAD application. The first product was CADstation-32. This model was a DOS-based "resident" application. CADstation-32 was first available in November 1980. At that time, AutoCAD (version 1) was delivered in a floating window, or with a MS-DOS based front-end. The DOS CADStation was followed by AutoCAD-6 in 1982, a 64-bit "resident" application. December 1981 AutoCAD is released in December 1981 as a 32-bit "resident" application for Windows 3.1, becoming one of the first commercial, commercially supported applications for the
