Oustanding photo editing software such as Photoshop can be a double-edged sword. Many times it can feel like a necessity and a right of passage, but when it's time to give up or move on, Adobe's top-of-the-line product can eat up your time, your effort and your memory. And for a subscription-based tool, the base price is rather steep. The upcharge for other programs and features can get downright insane. Over on the Adobe forums, there are threads hinting at various bugs, performance issues and other shortcomings that I hope Adobe has the foresight to address before the next major edition launch. Out of budget most of the time, I wish I had either taken a meandering tour through some other software or switched to a dedicated web-service-based RAW editor. As it's more or less the only suite around that allows non-destructive editing and includes features that bridge the gap to the complete RAW workflow picture for those lucky enough to have Sony's $1000 or more camera body , I do hope that Adobe continues to provide top-notch after-market software. I've since returned to my beloved GIMP and hope to use that as my go-to software, but, naturally, you really can't beat it's powerful tools inside Photoshop when practiced by a skilled designer. Before I wrap up, I think it's important to stress out that I use a variety of other photography-related applications. I also have Lightroom, but it's not the best color editing application by a long shot, and I use Gimp for all my RAW editing needs. That said, Adobe Photoshop is still an irreplaceable tool for me, a pro-photographer with an old Canon 550D and a 50mm 1.8 @ f/1.8.
